One of the tools that appears to have some real possibilities in the virtual world of ToP is Mind Mapping. There are a wide variety of versions one can use. I use Mindjet, others use open source tools. The helpful piece is that on-line or machine driven versions of Mind Mapping really do help groups work together.

I like this recent article by Dan Woods on his experience of using Mind Mapping. Here is the link.

The Power of Mind Mapping by Dan Woods

<http://www.forbes.com/2009/06/09/mind-mapping-wikis-technology-cio-network-mind-mapping.html>

One of the strengths of Mind Mapping for me is the ability to document events in real time, document completed events and build websites of documented results with ease.

Here is the request:

Can we explore the identification of at least three different Mind Mapping tools to use by ToP Facilitators for inclusion in this project?
